

KEY STAGE 1

Our inclusive, active workshops provide cross-curricular opportunities and are designed to enrich children's learning experiences. Created in line with National Curriculum objectives, they can support your classroom teaching, launch your topic or simply provide a fun day out!

Close Encounters (Visual Only)

A unique opportunity to get closer than any other visitor to some of our incredible reptiles and invertebrates. Touch and feel a range of artefacts as we learn more about these incredibly special animals.

This session links well to learning across a range of National Curriculum areas, so please let us know the objective of your visit and we can tailor our discussions to meet your needs.

Please note, to help ensure animal welfare, we no longer allow our animals to be held or touched by visitors. However, there will be opportunities to touch and feel the artefacts used within this session.

Habitats - Africa

Immerse yourselves on a journey through Africa as we discover more about this vast continent, the variety of habitats and visit some of the animals that call it home.

Get hands-on with our range of artefacts before setting off on an expedition to visit our African residents.

Head, Shoulders, Tails and Scales

A fun and engaging session to introduce your class to the similarities and differences between animals and how we classify them. Head, Shoulders, Tails and Scales will inspire through the use of artefacts, riddles...and an unsolved mystery.

Reptiles and invertebrates brought in to the workshop

Outdoor exploration to larger residents included
